

Tangam TableEye

Tangam's TableEye solution determines accurate player worth and detects advantage players by automatically reading and analyzing every card and player decision at your table games.

Tangam's award winning TableEye solution automatically captures every card, player decision and game outcome at your table games. Sophisticated software modules analyze the captured data and provide features to help boost you assess player worth more accurately, enhance the focus of your player development dollars, minimize advantage play or collusion, and pro-actively manage dealer productivity. The product is completely invisible to players and dealers, and works with existing cards, tables, card shoes, dealing procedures.

Features:

- Tracks cards and player decisions automatically
- Determines accurate player skill and number of hands played
- Calculates theoretical and actual win/loss for each player
- Automatic alerts for advantage play and collusion
- Dealer and casino wide performance reports
- Available for Blackjack (shoe and pitch) and Baccarat

Benefits:

- Make business decisions based on accurate player worth information
- Increase player development investment efficiency by 25%-40%
- Minimize advantage play and collusion
- Proactively manage dealer performance

Tangam Intelligent Minimums Management (TIMM)

Tangam's Intelligent Minimums Management (TIMM) helps casino operators increase the profitability of their table games by taking the guesswork out of determining table game betting minimums that are optimal based on customer demand.

The Tangam Intelligent Minimums Management solution receives live head count, betting minimums and wager data either through automated table game tracking systems such as Tangam's TableEye, TableiD or manual input by the dealers or pit supervisors. The data is analyzed in real time by our proprietary software algorithms in order to suggest Table Game Betting Minimum adjustments. The adjustments are presented as real-time suggestions to the pit manager. The solution's flexible architecture provides management with numerous options based on their table games floor mix, betting tier requirements, customer service philosophies and level of optimization desired. The result is the solution's ability to help you increase the profitability of your table games immediately and take the guesswork out of determining table game betting minimums.

Features:

- Analyzes real time customer demand to suggest betting limit changes
- Flexible architecture provides management with numerous configuration options
- Includes a real-time prediction engine that models player supply trends and predicts hourly supply
- Accepts numerous data input sources

Benefits:

- Enhance profitability of your table games immediately
- Ensure that your games are priced correctly based on customer demand
